MUSIC PLAYS A POWERFUL ROLE IN KID'S EMOTIONAL DEVELOPMENT

Improving self-esteem, reducing stress, and benefiting them in many other ways.

WIZARD WISDOM - Music is a universal language. Historically, the earliest musical instruments found were from 45,000 years ago. No other stimuli can so quickly have such a profound effect on kid's well-being than music. Music has been found to lift kids' spirits and help them develop their social-emotional skills, as well as aid academic performance. Please take time to share different kinds of music with kids to more quickly help them find the music that stimulates them the most. Perhaps share a few Youtube videos showing orchestras performing. Compare the conductor with parents and teachers, and the performing orchestra participants to kid's following direction, so that family households and classrooms can function more harmoniously.
